

New Technology Pure Water from Air The Haiti Project

Give Water
Give Life

Synergies by joint collaboration

The complementary competences of each collaboration partner are essential for a successful realization of the project.

The **Sanakvo foundation** is a non-profit Swiss foundation set up to provide clean drinking water from air to the poorest and neediest people. It **supplies the water modules, installation and technological support:**

New water from air process

The Sanakvo technology allows to bind water from air humidity and to extract the water in low-cost-modules using solar heat.

Drinking water for Haitian school

The goal of the project is to supply the new school 'Ecole mixte Arc-en-Ciel du Haut-Valais' in Montrouis Haiti (100 children) with clean drinking water with the low-cost Sanakvo-technology by the year 2013/2014.

The high-quality and low-cost Sanakvo-water-from-air-technology is well adapted to Haiti, which faces water scarcity due to the destruction of existing water-pipelines and contamination of water reservoirs by natural disasters. Haiti has very humid air which is permanently renewed by winds and thus it represents an inexhaustible new water source.
