SANAKVO PRESENTED A NEW TECHNOLOGY FOR GETTING PURE WATER FROM AIR AT THE SWISS PAVILLON OF THE 6TH WORLD WATER FORUM IN MARSEILLE (FRANCE).

Marseille, France 17th of March 2012 – Sanakvo Foundation participated in the 6th World Water Forum held this year from 12th to 17th of March in Marseille (France).

With 140 ministerial delegations, 800 speakers, NGOs, and public and private sector representatives from all over the world, the forum represented a key step to the resolution of water related problems in the world, from sanitation and access to clean water for all populations, to energy questions, including water resources management in light of climate change and food security.

Invited by the Swiss Water Partnership, hosted by the Swiss Agency for Development and Cooperation (SDC), our aim was to make known SANAKVO's innovative technology and noble project **“Water from Air”** to a large audience from all over the world.

We also wished to contact local authorities, institutions and individuals from regions with big water scarcity, in order to build collaborative partnerships to advance towards any possible field experimentations and future implementation of SANAKVO's technology.

This participation was a decisive step towards the realization of the next phases of the project. We had the opportunity to network with relevant individuals, whose reactions about SANAKVO's technology were overall positive. Over 800 [brochures](#) were personally handed over to interested persons. The next step will be to follow and re-contact them to start discussing and working on a concrete collaboration as soon as possible.

SANAKVO (in Esperanto “healthy water”) is a Swiss, non-profit, humanitarian foundation, which provides/develops an innovative solution for one of the biggest problems millions of people worldwide face every day: **Water scarcity**.

SANAKVO develops and supplies technology for extraction of clean drinking water from the air for the neediest people in the world.

A broad implementation of this new technology will have a huge positive impact on the planet.

The Board of Trustees is composed of experienced specialists, who are engaged to humanitarian and ethical activities and motivated to fight poverty and diseases through challenging modern sustainable technologies and networked projects to provide safe drinking water to people all over the world.
